

PRESS RELEASE

Prestige Medical on NHS Dental Decontamination Products & Services Agreement

Prestige Medical has announced that their Ultraclean II Washer Disinfector and C3 Advance Autoclaves, together with their product Maintenance and Validation Services, have all been accepted on to the NHS National Framework Agreement for the period 1 March 2010 to 28 February 2012.

The lengthy approvals process included a rigorous test regime which looked at all these criteria: the manufacturer's ability to supply and install, the availability of product training and education, added value – such as after sales and marketing support, and, of course, technical compliance. Products and services were then scored accordingly.

The UltraClean II Washer Disinfector and C3 Advance Autoclave are already a popular choice with those practices looking to achieve the 'best practice' standard in decontamination. With the additional security of knowing that the machines have achieved high scores in the tests conducted by the NHS Supply Chain, practices can also be assured that they are making a wise investment for their future decontamination needs.
